

Lloyd M. Jackman

97 years of age, from State College, Pennsylvania, died Aug. 30, 2023

Lloyd believed he was the luckiest of men because his passion, chemistry, was also his livelihood. His biggest piece of luck, he thought, was to have won a postdoctoral fellowship to Imperial College London, which, in the 1950s, possessed one of the few nuclear magnetic resonance (NMR) spectrometers in Britain. He had access to this instrument day and night and thus was able to accumulate the data for his book, *Applications of Nuclear Magnetic Resonance Spectroscopy in Organic Chemistry*. It became a key reference for those adopting NMR to solve long-standing puzzles in organic chemistry. - Marie Jackman, wife

Most recent title: Professor emeritus of chemistry, Pennsylvania State University

Education: BS, chemistry, 1945, MS, organic chemistry, 1948, PhD, organic chemistry, 1951, University of Adelaide

Survivors: Wife, Marie A. Jackman; sons, Richard Jackman and Andrew Jackman; three grandchildren
